

Non GCC toolchain for Embedded Linux

Khem Raj, Comcast

Introduction

- Embedded Linux Toolchains (Non Android)
- Cross compiling
- Clang/musl based toolchains for Embedded Linux
- Whats missing still
- Discussions

Current Norm

- Embedded Linux is primarily cross-compiled
- GCC cross toolchains build systems
 - Crosstool-NG
 - Buildroot
 - OpenWRT
 - OpenEmbedded
 - OpenADK
 - Crossdev (Gentoo)
 - Debian cross-tools
 - EmbToolkit
 - many more....

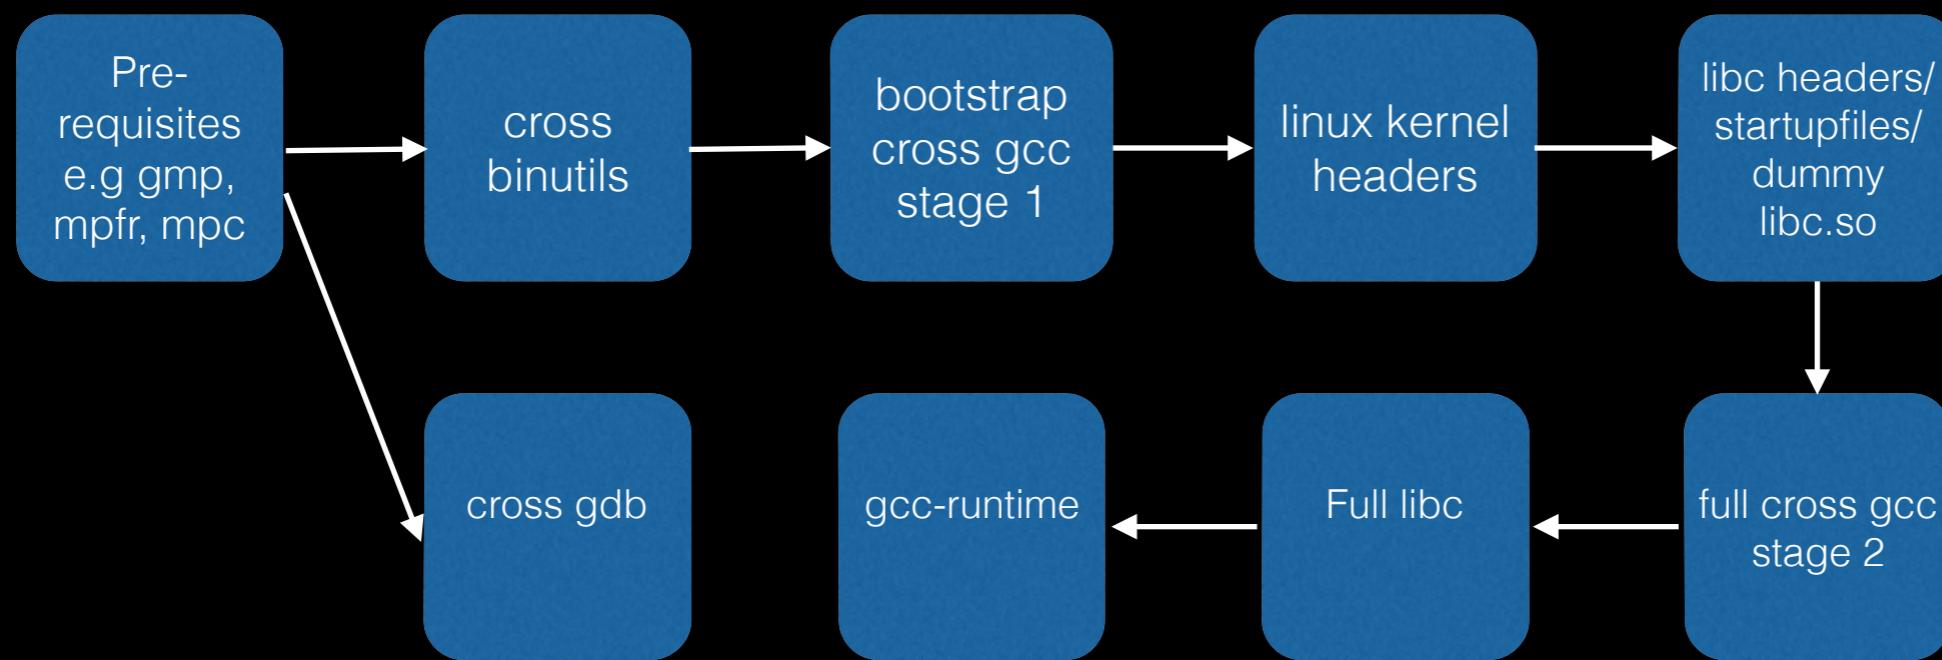

Current Norm

- GNU toolchain basic ingredients
 - Binutils
 - Provides linker, assembler and post processing tools
 - C/C++/Java/ADA/Fortran/golang gcc compiler
 - Cross Compilers
 - C/C++ runtime (libgcc, libstdc++, libfortan ...)
 - System C Standard Library
 - glibc
 - uclibc
 - newlib
 - Debugger
 - gdb

Current Norm

- Supports many Architectures/machines
 - As many as gcc backend can support
 - <https://gcc.gnu.org/backends.html>
 - arc, arm, aarch64, mips, mips64, powerpc, powerpc64, x86, x86_64, tile, nios2, microblaze, and many more

Toolchain Build Sequence

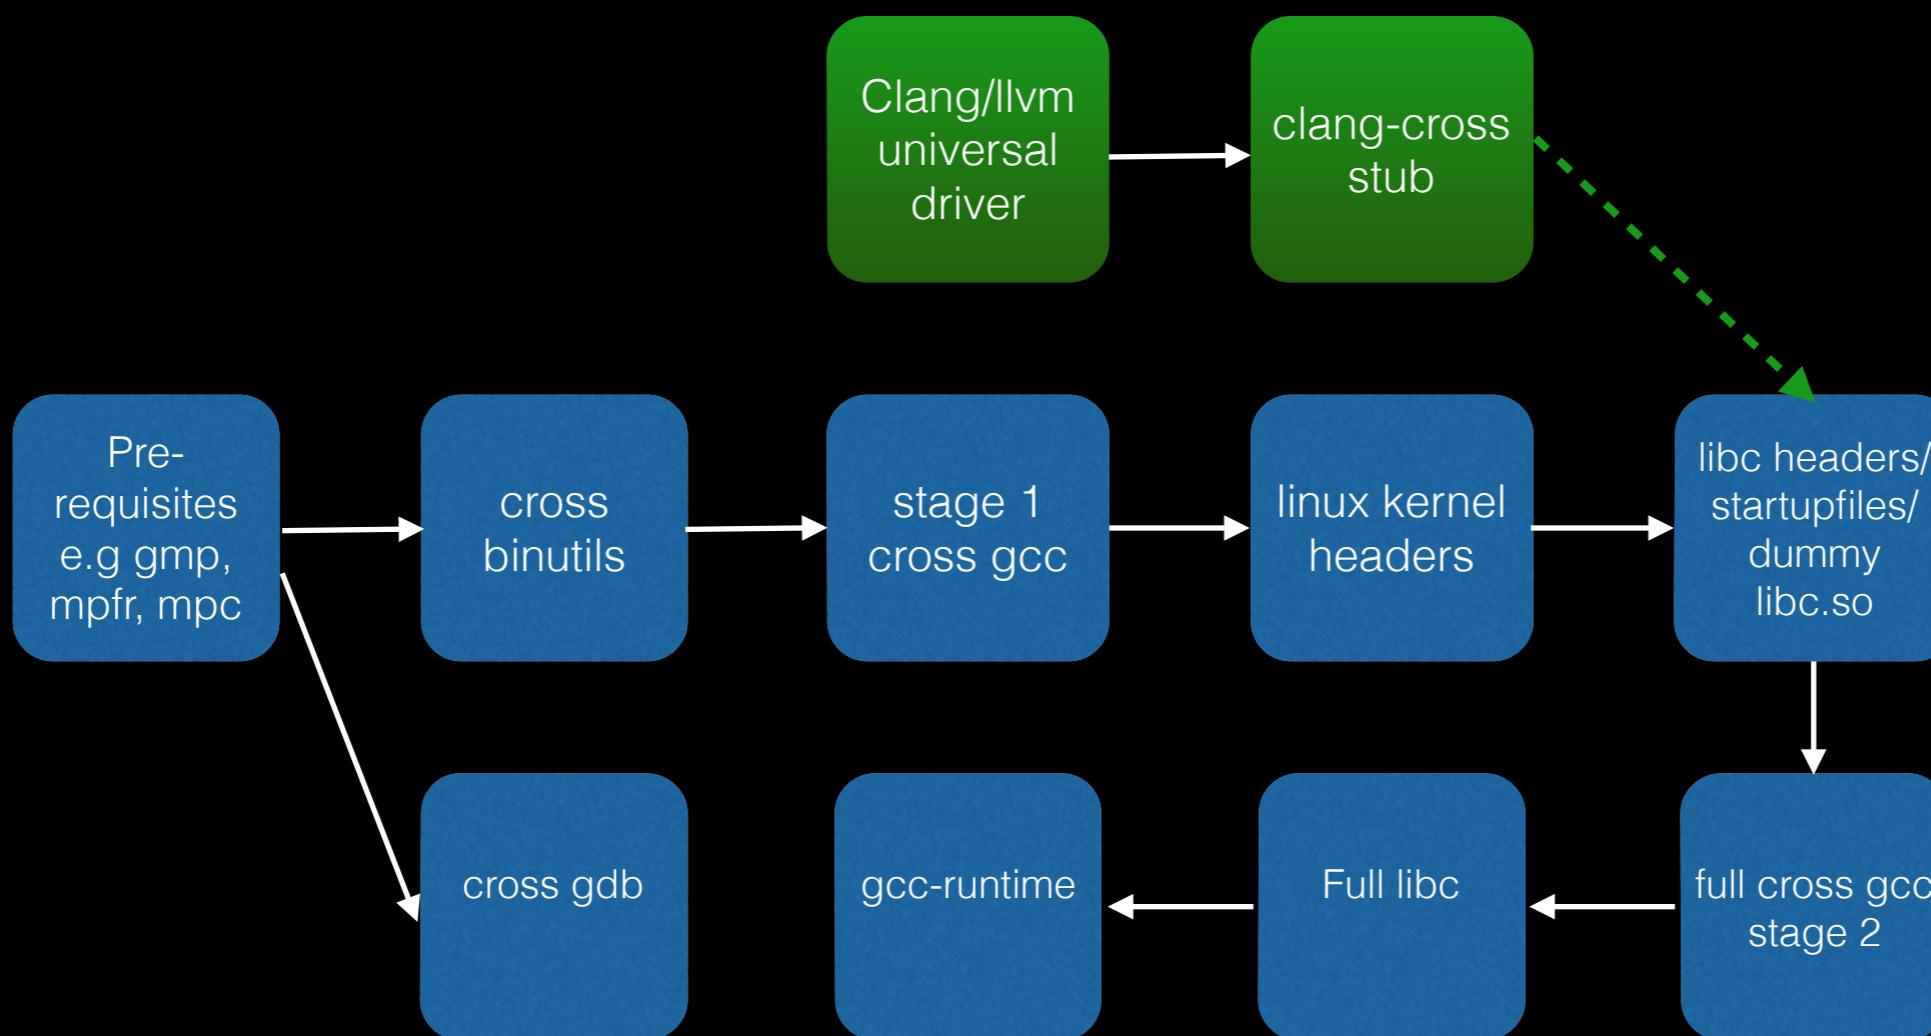

Toolchain Build Sequence

- Cross building GNU toolchain is a bit convoluted
 - GCC and glibc has catch-22
 - various features poked by configure are faked.

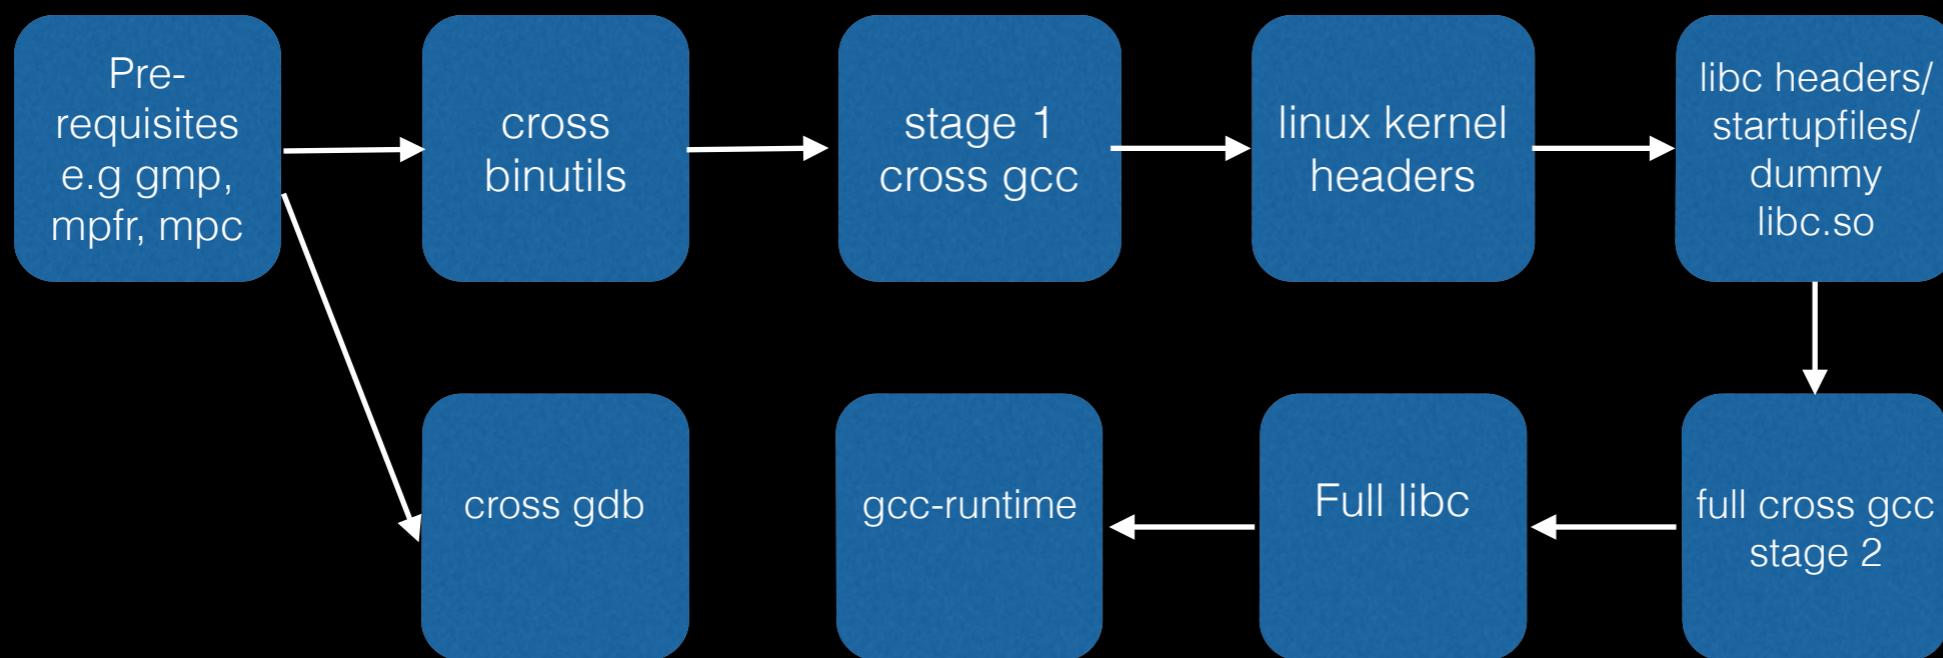

A non-gcc toolchain

- Use clang/llvm for cross compiler
- Use musl for C library
- Replace C/C++ runtime by compiler-rt and libc++
+
- Use native assembler, linker (limited support)

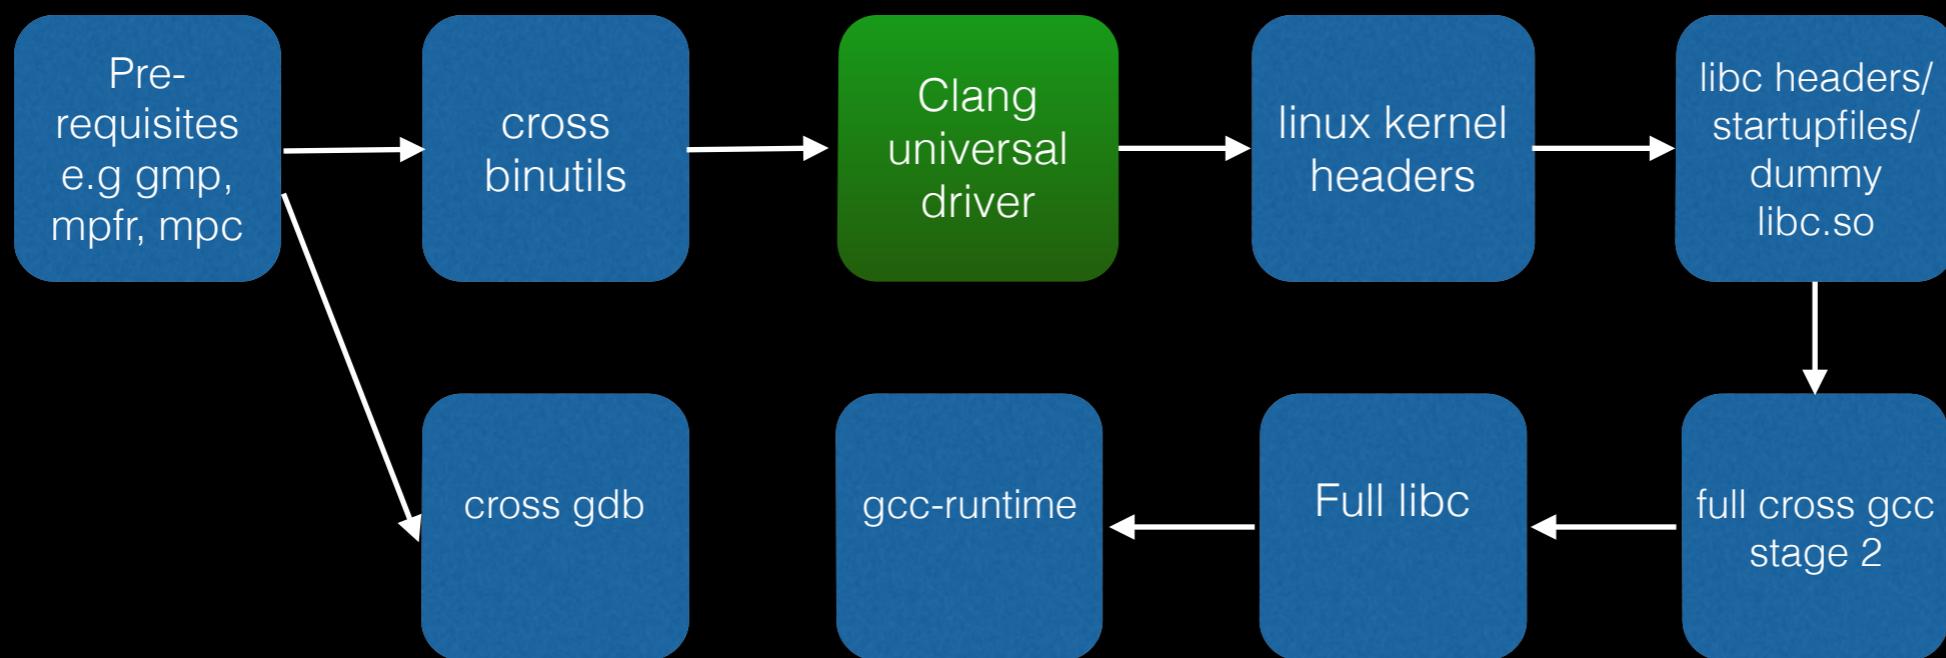

Toolchain Build Sequence

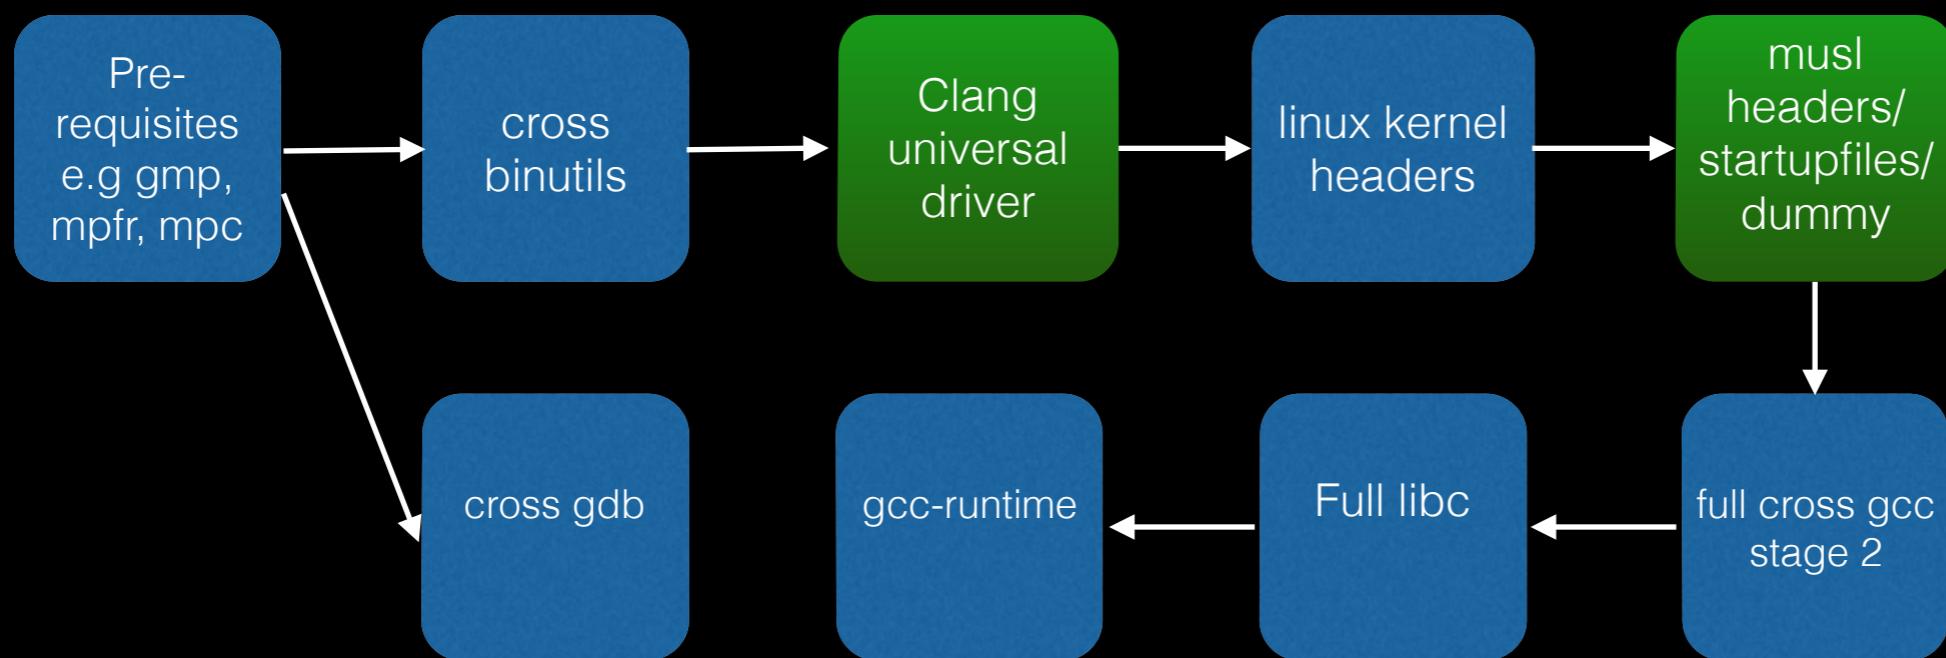

Non-GCC Cross toolchain

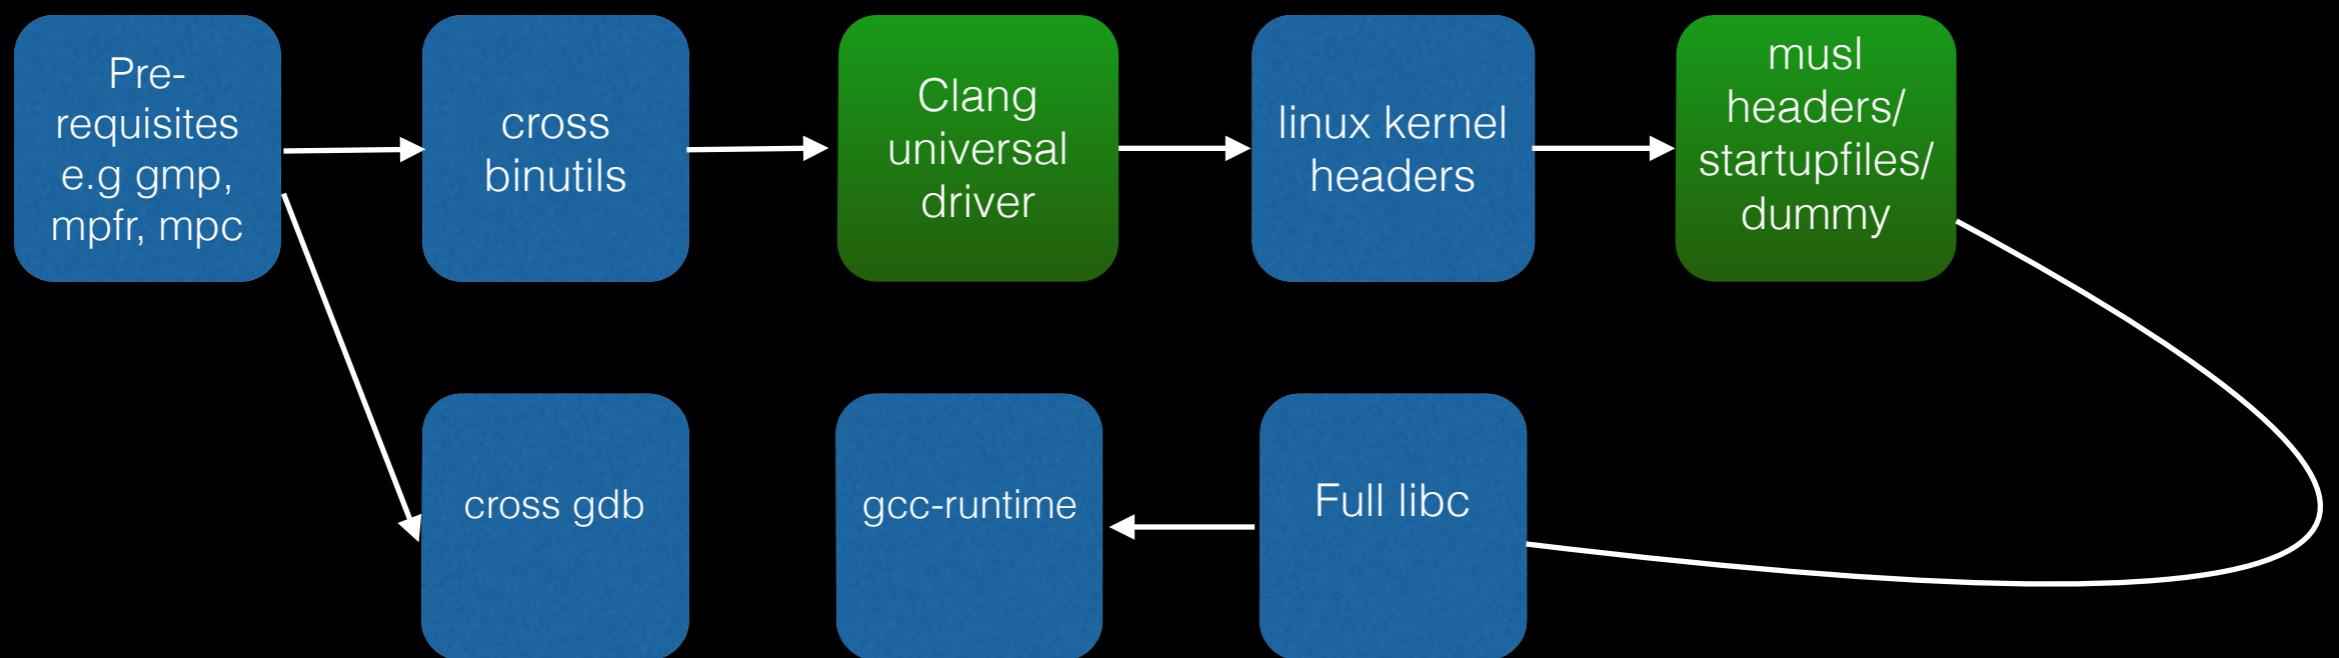

Non-GCC Cross toolchain

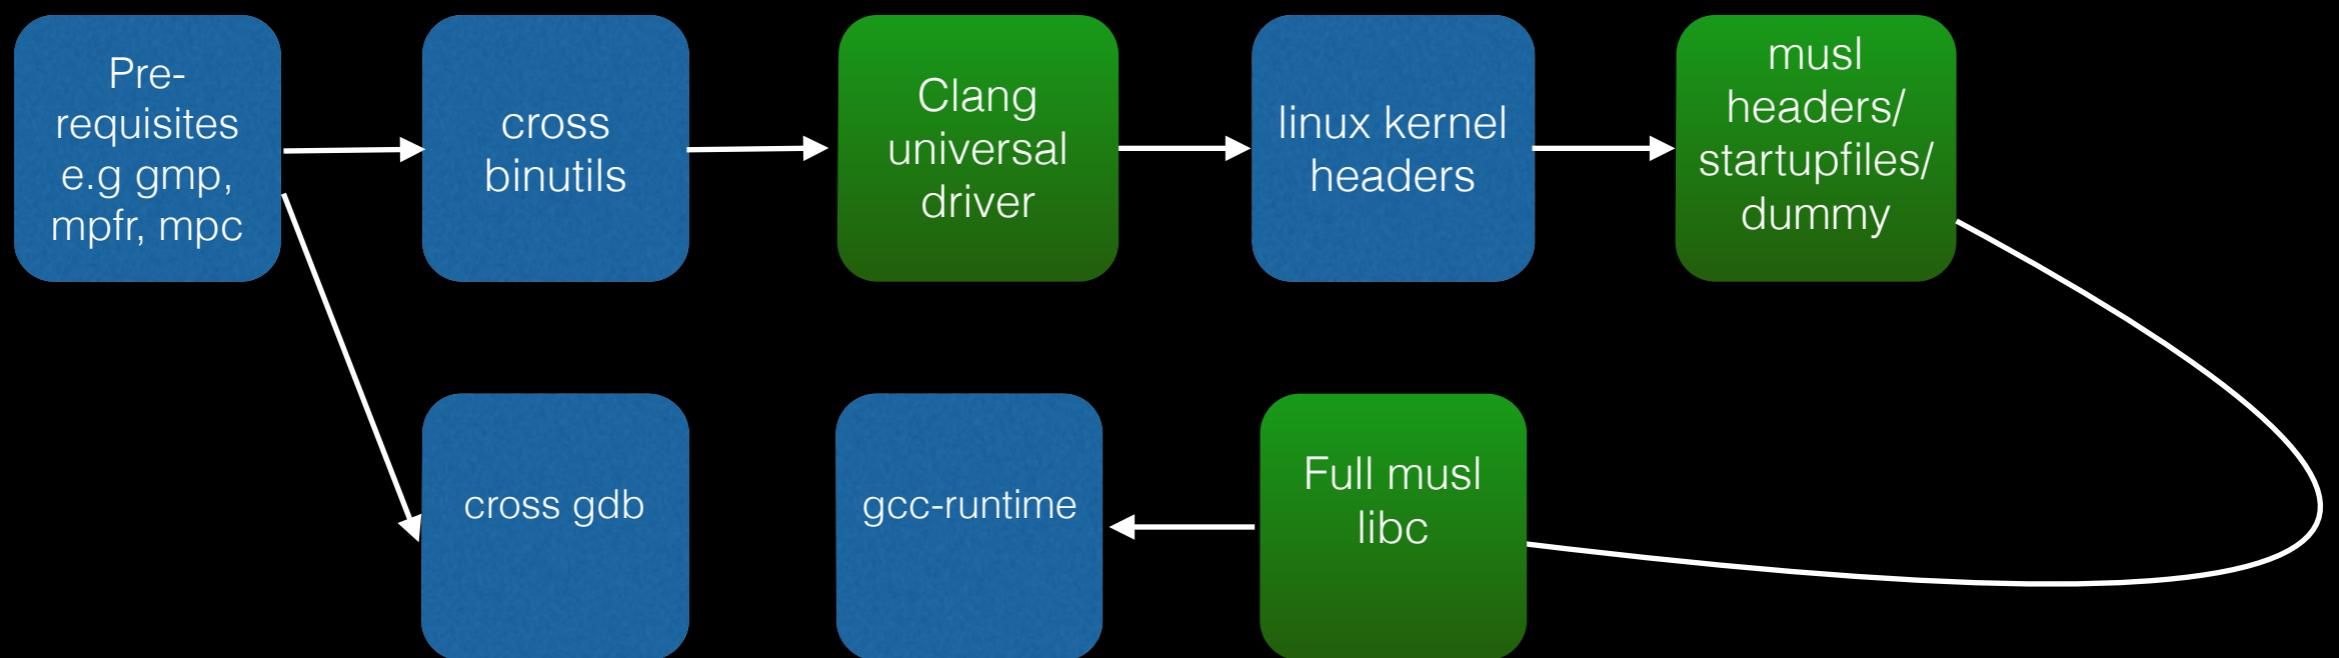

Non-GCC Cross toolchain

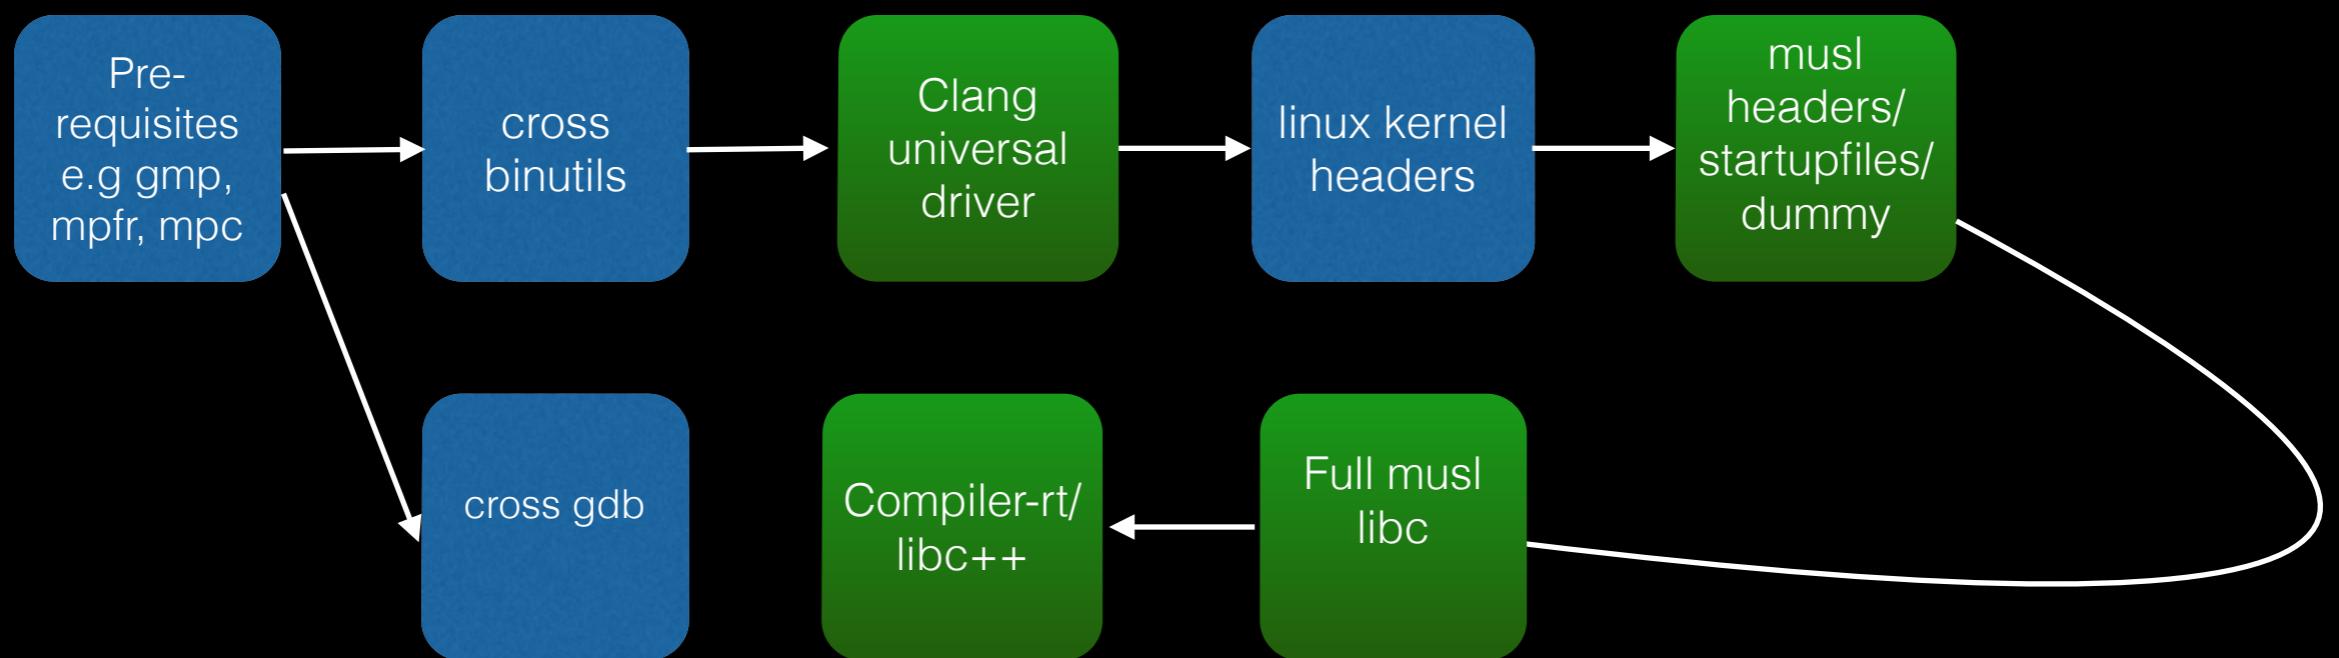

Non-GCC Cross toolchain

Non-GCC Cross toolchain

Non-GCC Cross toolchain

Clang-musl - Now

- Still uses GCC runtime
- Replace libgcc with compiler-rt
- Replace libstdc++ with libc++
- What about other runtimes ?

Limitations

- Currently targeting armv7a+, aarch64 and x86/x86_64 architectures
- There are other prevalent architectures e.g. mips, PowerPC in Embedded Linux

Limitations

- Not all software is yet clang compile-ready
- Add GCC and Clang cross compilers to SDK
- musl based SDKs don't have full set of tools yet

OE Work

- meta-musl layer (<https://github.com/kraj/meta-musl>)
- meta-clang layer(<https://github.com/kraj/meta-clang>)

Thank you
