STG for ABI monitoring

Tuesday, 13 September 2022 15:45 (15 minutes)

ABI monitoring is an important part of the stability and upgrade-ability promises of the GKI project. In the latest generation of our tooling, we applied concepts from graph theory to the problem space and gained high confidence in the correctness and reliability of the analysis results. What else can we fit into this model and what would be most useful?

I agree to abide by the anti-harassment policy

Yes
