Reflections on kernel quality, development process and testing

Wednesday, 11 September 2019 12:00 (45 minutes)

In this talk Dmitry will highlight some of the areas for improvement related to release quality, security, and developer experience and productivity. Then try to show that the existing processes, approaches and tools poorly cope with the current scale and rate of change and don't provide adequate quality and developer experience. Lastly Dmitry will advocate that only pervasive changes to the process, tooling and testing approaches can significantly improve the situation.

I agree to abide by the anti-harassment policy

Yes

I confirm that I am already registered for LPC 2019
